The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine Kevin Davies

In 2000, President Bill Clinton signaled the completion of the Human Genome Project at a cost in excess of \$2 billion. A decade later, the price for any of us to order our own personal genome sequence—a comprehensive map of the 3 billion letters in our DNA—is rapidly and inevitably dropping to just \$1,000. Dozens of men and women—scientists, entrepreneurs, celebrities, and patients—have already been sequenced, pioneers in a bold new era of personalized genomic medicine. The \$1,000 genome has long been considered the tipping point that would open the floodgates to this revolution.

Do you have gene variants associated with Alzheimer's or diabetes, heart disease or cancer? Which drugs should you consider taking for various diseases, and at what dosage? In the years to come, doctors will likely be able to tackle all of these questions—and many more—by using a computer in their offices to call up your unique genome sequence, which will become as much a part of your medical record as your blood pressure. Indeed, many experts are advocating that all newborns have a complete genome analysis done so that preventive measures and preemptive medicine can begin early in life.

How has this astonishing achievement been accomplished? And what will it mean for our lives? To research the story of this unfolding revolution, critically acclaimed science writer Kevin Davies has spent the past few years traveling to the leading centers and interviewing the entrepreneurs and pioneers in the race to achieve the \$1,000 genome. He vividly brings to life the extraordinary drama of this grand scientific achievement, revealing the masterful ingenuity that has transformed the process of decoding DNA and delivering the information it possesses to the public at large.

Davies also profiles the future of genomic medicine and thoughtfully explores the many pressing issues raised by the tidal wave of personal genetic information. Will your privacy be protected? Will you be pressured, by insurance companies or by your employer, to get your genome sequenced? What psychological toll might there be to discovering you are at risk for certain diseases like Alzheimer's? And will the government or the medical establishment come between you and your genome?

One thing that is not in question is that we are moving swiftly into the personalized medicine era, and *The \$1,000 Genome* is an essential guide to this brave new future.

From reader reviews:

Ruth Davis:

What do you think about book? It is just for students because they are still students or the idea for all people in the world, what the best subject for that? Just simply you can be answered for that query above. Every person has different personality and hobby for each and every other. Don't to be obligated someone or something that they don't want do that. You must know how great in addition to important the book The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine. All type of book could you see on many solutions. You can look for the internet methods or other social media.

Todd James:

Do you have something that you prefer such as book? The publication lovers usually prefer to select book like comic, quick story and the biggest the first is novel. Now, why not hoping The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine that give your fun preference will be satisfied through reading this book. Reading addiction all over the world can be said as the opportunity for people to know world considerably better then how they react toward the world. It can't be explained constantly that reading habit only for the geeky man or woman but for all of you who wants to possibly be success person. So , for every you who want to start studying as your good habit, you are able to pick The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine become your starter.

Lawrence Gibbs:

Your reading 6th sense will not betray you, why because this The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine reserve written by well-known writer who really knows well how to make book that can be understand by anyone who have read the book. Written in good manner for you, still dripping wet every ideas and publishing skill only for eliminate your current hunger then you still skepticism The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine as good book not simply by the cover but also from the content. This is one publication that can break don't determine book by its include, so do you still needing a different sixth sense to pick this kind of!? Oh come on your examining sixth sense already said so why you have to listening to a different sixth sense.

Tessa Krieger:

That book can make you to feel relax. This kind of book The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine was multi-colored and of course has pictures on there. As we know that book The \$1,000 Genome: The Revolution in DNA Sequencing and the New Era of Personalized Medicine has many kinds or category. Start from kids until teenagers. For example Naruto or Private eye Conan you can read and think you are the character on there. Therefore , not at all of book are

generally make you bored, any it offers up you feel happy, fun and relax. Try to choose the best book for yourself and try to like reading this.
